THE SMARTRACK®

MAKES LABORATORIES SAFER AND

MORE EFFICIENT FOR THE FUTURE

Bespoke laboratory organization

The SmartRack® creates the optimal working environment for your laboratory, because the SmartRack® is the first and world's only modular organization system for laboratory workstations in which a wide variety of laboratory accessories can be stored.

It enables user efficient one-handed operation, creates order as well as free space for working and therefore improves workstation safety. The modular design of the SmartRack® means it can be adapted to different activities and different needs of its users.

Why the SmartRack® also has a place in your laboratory

The flexible organization system from Better Basics helps you improve safety when working and increases your team's safety in the lab. It also helps you achieve higher quality and be more innovative and efficient in your work. For example, using the SmartRack® reduces walking distances and speeds up workstation cleaning. Assembling and reconfiguring test set-ups is also made significantly easier. The SmartRack® demonstrates what harnessing the power of the latest 3D manufacturing technology combined with scientific expertise can achieve.

Problem

- Shortage of space
- Time pressure

Consequence

- Disorganization
- Accidents
- Sample mix-ups
- Sample loss
- Stress

Solution

The **SmartRack®** - the organization system for every laboratory

Result

- Improved safety
- Increased efficiency
- Organization
- Clarity
- Flexibility

FROM ACCESSORIES TO HOLDER FOR WASH BOTTLES – everything from a single source and always the first choice

The SmartRack® was designed by scientists and laboratory users, because the Better Basics team knows the special processes in laboratories and has developed the SmartRack® and its modules in cooperation with various laboratory users. A wide variety of module configurations are available to meet your individual requirements. Whether you work in the field of chemistry, biology, biochemistry, food chemistry, pharmacy or medicine, the SmartRack® represents the innovative standard for every modern laboratory workstation and should form part of the basic equipment of every laboratory. With us, you can choose from over 100 holders or modules for organizing your laboratory workstation, which you can combine as required in our SmartRack®.

Better Basics defines five areas for the SmartRack® to optimize laboratory work in the 21st century

Organization – more organization at laboratory workstations

Do you need a secure holder for microliter syringes, a storage option for screw top bottles or a way to temporarily store sample containers and all that in a tight space?

Transportable and scalable, the SmartRack® remains your partner from start to finish of your work when it comes to organizing workstations and storing your laboratory accessories and glassware in a structured and safe manner at your workstation.

Space saving – 80% space saving in the laboratory

Don't have much space but still want to work in a structured way? The SmartRack® offers an effective solution for everyday challenges in laboratory work – in various fields including chemistry, biology, biochemistry, the food industry, pharmacy and medicine. This eliminates the need for various holders, including those for pipettes or round-bottom flasks (e.g. cork rings, three-finger clamps), or a waste bin.

Safety – significantly improved safety when working in the laboratory

Did you know that each accident at work in the chemical industry costs an average of €25,000? In 2018 alone, more than 15,000 accidents at work were reported in this industry. The resulting costs and lost working hours are huge and could be avoided through better safety at work and better working conditions. The SmartRack® helps achieve these improved conditions by offering the highest level of safety through its stable metal frame and the integrated anti-tip protection for the entire SmartRack®. The modules are securely attached into the slot rails of the SmartRack® by a click mechanism, so that all samples and devices are securely fixed.

Efficiency – improved efficiency in research and analysis

Are you still searching or are you already researching? Laboratory workers spend around 10 minutes a day searching because disorganization makes their work more difficult. This adds up to significant lost work time over a period of months and results in unwanted costs and frustration. Optimal working conditions pave the way for focused and routine work and also help prevent mistakes. Employees rely on optimal conditions in the workplace to remain physically and mentally active, creative and innovative in the long term.

Modularity and adaptability – your partner in the lab, the SmartRack®

Whether you need general basic equipment for your laboratory or special modular set-ups for analytics – the SmartRack® is your number one choice. The number and position of the SmartRack® modules can always be adapted to your individual needs. Custom made fixtures according to customer requirements are also available.
