

Cleaning and Care Instructions

CORDURA® & Truck Tarpaulin

CORDURA® is a high-performance, exceptionally durable material that can be used in a variety of applications. CORDURA® is tear resistant, abrasion resistant, windproof, highly water repellent and quick drying. Consisting of textured polyamide 6.6 fabric taffeta with acrylic and polyurethane coating on both sides and fluorocarbon impregnation, CORDURA® offers the perfect protection against strong physical strain. Because of its resistance to tears, cuts and wear, CORDURA® is unparalleled. That is why it is found in many premium products where durability plays an important role, such as in the circumferential edge protection in our STAVANGER products.

Truck tarpaulin is a polyester carrier fabric with a polyvinyl chloride coating on both sides and is used in STAVANGER products in various thicknesses. Some benefits to this hard-wearing material are that it is dirt repellent, tear-resistant, waterproof, resistant to weathering, decomposition, and many chemical substances. Both CORDURA® and truck tarpaulin are very well protected by the elaborate coatings and treatments and are ideal for daily rescue operations.

To maintain this protection for as long as possible, we recommend that you clean or disinfect as follows:

Manual cleaning: Remove soiling with a soft cloth and Body-temperature soap solution using circular movements. For heavier soiling, repeat the process until the desired result is achieved.

Mechanical cleaning: Not recommended

Disinfection: In case of heavier soiling or biological contamination, we recommend the use of medical surface disinfectants according to the specifications of the respective manufacturers.

After each use and cleaning/disinfection, make sure that the product is completely dry.
